ICX-FAT BOYS

Available in Ø 5.5 and 6.2 mm · Lengths 8 · 10 · 12.5 mm

ICX-FAT BOYS implants made from Gigantium[®] broaden the range of treatment options for demanding clinical situations.

The short implant lengths open up additional therapeutic options where bone availability is limited and support indication-led treatment planning. Depending on the clinical starting point, short implants can be a suitable alternative to other implant dimensions. The appropriate implant geometry is selected based on the individual patient situation and the clinician's assessment.

ICX-FAT BOYS IMPLANTS OFFER YOU THE FOLLOWING BENEFITS:

- ➔ Consideration of anatomical conditions during implant planning
- ➔ Support for bone-preserving treatment concepts
- ➔ Greater flexibility in implant positioning
- ➔ Patient-focused care concepts
- ➔ Clinically established treatment options
- ➔ Option for single-tooth restorations, as indicated

ICX-DIAMOND[®] FAT BOYS – MADE FROM GIGANTIUM[®]!

THE FEATURES OF ICX-DIAMOND[®]:

- ICX-DIAMOND[®] implants are manufactured from GiganTium[®]. GiganTium[®] offers higher tensile strength than standard titanium.
- 100% pure titanium 4KV
- Positive impact on material fatigue
- Desired ICX micro-roughness
- Hydrophilic and micro-structured implant surface

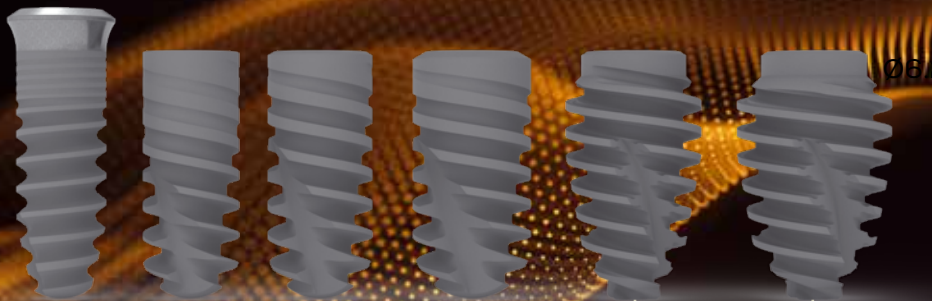

We know of no pure titanium stronger than GiganTium[®]!

GiganTium[®]
The Elite-Material.
